## Laxtracide NDW

TECHNICAL INFORMATION

### Description

It is nonionic wide spectrum defoaming agent

### Composition

A formulation of complex hydrocarbons

### Functional Properties

Defoaming Agent

### Target Industries

Agro formulations  
Ceramics/Clay  
Metal processing  
Emulsion polymerization  
Photographic chemicals  
Adhesive  
Agriculture  
Electronic chemicals  
Paints & Coatings  
Rubber (Latex)

### Typical Properties

Colour & Appearance	Light yellow clear liquid
Nature	Nonionic
5% pH ( in distilled water)	6.0-8.0
Solubility in water	Insoluble

### Dosage

The dosage of Laxtracide NDW is recommended @ 0.1 to 0.5 % of the final product depending on the type and susceptibility of the finished product and the raw material used.

The **Sonachi** Microbiological Laboratory will be ready to assist in the optimization of the dosages required for the products. This facility is most useful where formulation has greater microbiological susceptibility.

### Method of Use

Laxtracide NDW can be added either manually or by automatic metering device, at any stage of the production process.

### Compatibility

Laxtracide NDW is compatible with most of the raw materials used in the microbiological susceptible products. It causes no discoloration and may be used in formaldehyde sensitive systems.

### Availability

Laxtracide NDW is readily available ex-stock at all time in 45/180 kgs HDPE carboys.

### Storage

It is also recommended that product should be stored in original Sonachi sealed containers at ambient temperature and protect from direct exposure of sunlight. It is also recommended that the product should be used within 6 months of delivery.

### Handling

Since material is classified as irritant may produce some burning skin. It is recommended that normal protective clothing, gloves and face protection should be worn during handling the product.

### Toxicology

Information available upon request
